

# AES-260

## BASIC RETAIL SOFT TOUCH CAR WASH

*Made In The USA!*

- Compact
- Efficient
- State-of-the-art
- Rugged all stainless steel construction

AUTECH's AES-260 vehicle wash system is built on the best selling 425 platform. For the operator looking for an economical workhorse, this is the machine for you. Some operating limitations apply. Made in the USA.

The AES-260 Soft Touch Car Wash System is AUTECH's base model soft touch machine. Built with all stainless steel construction, with stainless steel guide rails, treadle ramps, tire stops, and galvanized track, this new AUTECH introduction offers unprecedented wash quality, trouble-free operation and long-term efficiency and durability. Other features of the AES-260 are water-based hydraulics with tank heater, quick release door panels, fore & aft mitters with full mitter retract standard, on-board or off-board rinse capability. Like all of AUTECH's other car wash systems, the AES-260 maintains the quality standards and durability that AUTECH is known for and what continues to make us leaders in the car wash industry.

## Features:

## Benefits:

---

Water-based Hydraulic Operation	Specially designed water-based hydraulic fluid makes the machine environmentally friendly in all circumstances.
Stainless Steel	Absolutely the most durable construction for dependable, long-term operation in harsh car wash environments.
All Welded Frame	Welded, not bolted, for superior structural integrity, ensuring enhanced machine longevity & performance.
Dual Arm Support	Keeps arm rotation true and consistent on all four arms.
Hydraulic Operation	Variable speed hydraulic drive for smooth operation provides control of the torque and speed of each arm for effective cleaning without damage.
Direct Drive	No chains, gear boxes or belts to require maintenance.
Soft Cloth or Polyflex Friction	Double front and rear side arms, plus our dual cloth mitter ensures that every area of a vehicle's surface is gently massaged clean with the use of soft cloth (standard) or polyflex (optional) strips lubricated with just the right volume of soap and water. Years of research and testing have determined the best sizes, lengths, cuts, cores and hardware to ensure unprecedented cleaning performance.
Split Hub Design	The lower section is wide to contour to the curved vehicle undersides. The top is slim to accommodate the tops of vans and trucks with large mirrors. We call this our "mirror-saving" hub design – ensuring safe, thorough cleaning.
Overhead Mitter	The double action, overhead mitter effectively cleans all flat surfaces without the dangers and damages once associated with top brushes.
Mitter Retract	Full retract standard for vehicle safety during entry and exit.
On-board, Self-Diagnostic Computer	On-board computer minimizes electrical requirements for fast, economical installation. Additionally, self-diagnostic software monitors car wash functions.
Hydraulic Tank Heater	Keeps hydraulic oil warm to ensure consistently smooth equipment start up.
Rear Super Clean	Optional feature provides superior wash quality for SUV and cross-over style vehicles.
Rinse	On-board rinse or free-standing rinse arch capability. Must add to system.
Controls	Blower and door controls standard.
Options	Includes but not limited to triple foam, wheel & rocker panel blasters, and more.
